

## Network Drops Addition - Infrastructure Cabling

### The Challenge

Lyncean Technologies, in Fremont, required 20 new additional network drops (16 news and 4 relocations to be exact). They needed this quickly and reached out to Accend Networks.

**Client:** Lyncean Technologies

**Location:** Fremont

### Our Solution

After receiving the inquiry and requirements from Robert Lai, the IT Manager, Accend quickly started working on providing a quote based on the floor plan and new network drops required. We quickly provided a quote with breakdown of equipment needed (network cables, wall plates, CAT6 RJ-45 jacks..etc) and the total cost for labor, the quote was approved.

### The Results

By Monday and through the next two weeks (time was needed to run the cables and for some healing time needed for a concrete area that needed to be cured), Lyncean had all 20 CAT6A ethernet drops run, labeled, and documented. Robert was a happy camper and mentioned he will continue to use our service for other work needed.
